

Assignment – 03

Bank Loan Application Form — Basic Fields Use Case

1. AIM

To design and develop a **Bank Loan Application Form** using **Zoho Creator** by utilizing all thirteen Basic Fields available in the Form Builder. The application collects applicant details, contact information, employment and income details, loan requirements, existing liabilities, and credit-check consent. It also provides a report for reviewing and pre-screening submitted loan applications.

2. Traditional Application Development vs Low-Code Application Development

Traditional Application Development	Low-Code Application Development
Requires extensive programming knowledge.	Requires minimal coding and uses visual development tools.
Development is generally time-consuming.	Applications can be developed faster.
Developers manually create forms, database operations and UI components.	Forms, fields, reports and workflows can be configured visually.
Requires separate development and testing of many components.	Many common components are available as built-in features.
Changes may require modifications to source code.	Changes can often be made through visual configuration.
Deployment and maintenance can require more technical effort.	Deployment and maintenance are simplified by the platform.
Example: Java, Python, PHP based application development.	Example: Zoho Creator, Microsoft Power Apps, OutSystems.

For this application: Zoho Creator was used to develop the **Loan Application & Pre-Screening Management** system using a low-code approach.

3. Benefits and Challenges of Low-Code Development

Benefits

1. **Faster Development** – Applications can be created quickly using visual components.
2. **Less Coding** – Basic forms, reports and workflows can be developed with minimal programming.
3. **Easy Modification** – Fields and form layouts can be changed easily.
4. **Reduced Development Effort** – Common application components are already provided by the platform.
5. **Easy Data Management** – Submitted form data can be viewed and managed through reports.
6. **User-Friendly Development** – Visual interfaces make application development easier for beginners.

Challenges

1. **Platform Dependency** – Applications depend on the features and services provided by the selected platform.
2. **Limited Customization** – Highly specialized requirements may require additional coding.
3. **Security Concerns** – Sensitive information must be handled with appropriate access controls.
4. **Integration Limitations** – Complex integrations may require additional configuration or APIs.
5. **Scalability Considerations** – Large and complex applications may require careful platform and architecture planning.

4. Comparison of Existing Low-Code Platforms

Feature	Zoho Creator	Microsoft Power Apps	OutSystems	Mendix
Development Approach	Low-code	Low-code	Low-code	Low-code
Visual Form Builder	Yes	Yes	Yes	Yes
Database Support	Built-in	Dataverse / connectors	Built-in	Built-in
Workflow Automation	Yes	Yes	Yes	Yes
Reporting	Yes	Yes	Yes	Yes
Custom Coding	Deluge scripting	Power Fx / other options	Supported	Supported
Integration	APIs and connectors	Microsoft ecosystem and connectors	APIs and integrations	APIs and integrations
Main Use	Business applications and process automation	Business applications and Microsoft ecosystem	Enterprise application development	Enterprise application development
Ease of Development	Visual and beginner-friendly	Visual	Visual	Visual

5. RESULT

The **Bank Loan Application & Pre-Screening Management** application was successfully developed using **Zoho Creator**. All thirteen Basic Fields were implemented, including Name, Email, Address, Phone, Single Line, Multi Line, Number, Date, Time, Drop Down, Radio, Multi Select and Checkbox.

The application was organized into four sections and the required validation rules were configured. Three sample loan applications were submitted successfully and displayed in the **Loan_Application_Report**.

Thus, the experiment demonstrated how a **low-code platform can be used to develop a structured banking application with reduced coding effort and faster development.**
